GateScanner® Storebridge

GateScanner® Storebridge is a lightweight file transfer utility, with automation, designed to synchronize, and manage data across multiple storage platforms with access to CDR file security.

Storebridge provides organizations with a comprehensive tool to **browse, transfer, and sync** between local and remote storages, enabling secure file management across AWS, Azure, FTP/SFTP, and local storage systems.

Highlights

- **Multi-Platform Connectivity** – Seamlessly connect to AWS, Azure, FTP/SFTP, Local and UNC storage systems

- **Large File Transfer Capabilities** – Transfer large files and folders while preserving folder structures

- **Flexible Synchronization Options** – Configure copy/cut operations, 'sync new files only', set sync frequency, and define active hours

- **Comprehensive Reporting** – Detailed activity reports with extensive filtering, automated route status, transfer history, and error logging

- **Enterprise-Grade Performance** – Thread management for load-balancing and proxy support for enhanced security

- **GateScanner Integration** – Direct link to GateScanner Security Dome CDR file sanitization with remote scanning profile selection

Technical Features and Capabilities

- **Supported Sources/Destinations:** AWS, Azure, FTP, FTPS, SFTP, UNC, SMB, local folders, and shared folders

- **File Operations:** Connect, browse, create and delete folders across all supported platforms. Copy/cut operations with folder structure preservation

- **Synchronization Options:** Sync new files only, configurable sync frequency, set active hours for automated transfers, and manual transfer capabilities

- **Reporting and Monitoring:** Detailed reporting with extensive filtering capabilities, automated route status tracking, comprehensive transfer history, error logging and notifications via Syslog/SMTP

- **Performance Optimization:** Thread management for intelligent load-balancing, support for proxy configurations, and optimized for large file transfers

- **GateScanner Security Dome Integration:** For GateScanner Security Dome users - direct link to CDR file sanitization and digital vaults with remote scanning profile selection

- **Central Management:** Centralized administration console, detailed activity reports, interfaces with SIEM/Syslog, automated updates

Use Cases

- **Enterprise File Management:** Seamlessly synchronize files across on-premises and cloud storage for distributed teams

- **Automated Backups:** Schedule regular backups from local storage to cloud platforms with configurable sync frequencies

- **Secure File Transfer:** Transfer sensitive files between systems with integrated CDR sanitization capabilities (when used with GateScanner Security Dome)

- **Multi-Site Synchronization:** Keep files synchronized across multiple office locations and cloud repositories

- **Cloud Migration:** Facilitate smooth migration of large data sets from on-premises to cloud infrastructure
